

ALMAMET

„ALMAMET is one of the largest producers of high-quality magnesium powders and granules. They say that their products rank amongst the best in the world and are used by the leading manufacturers of military flares and pyrotechnics. Where ultra-fine and tightly controlled atomized magnesium powders are required for the ever increasing need for missile countermeasure systems ALMAMET technology is at the forefront of innovation. They work to ensure that ALMAMET countermeasures specified powders are amongst the best on the market through continual dialogue with end users and national standards authorities.

Research carried out and continually updated allows ALMAMET to supply to the current DEF STAN 13/30, MIL-M382C, MIL-P1406B (MU) and many other customer variants. Formed 25

years ago, ALMAMET has strived to be the best in every sector of business in which it operates, the result being that it is now one of the world's largest supplier of magnesium powders and granules. With operations on four continents and a strong presence in the defense, chemical and steel industries, it has grown to today's annual turnover in excess of 40 million Euros. Its headquarters is based in Airing, southern Germany where the commercial and technical activities are controlled.“
